## Education

**University of Waterloo** Sep 2023 - Aug 2027
*Bachelor's degree, Computer Science, Finance, and Statistics* *Waterloo, ON, Canada*

## Skills

| | |
|---|---|
| **Product:** | Discovery, PRDs, user stories, roadmap prioritization, A/B testing, funnel & retention analysis, creator & community programs, KPI definition, UAT, GTM |
| **Tools & Analytics:** | Jira/Atlassian, Figma, Confluence, Notion, ServiceNow, SQL, Power BI, Excel |
| **Technical:** | Python, Rust, TypeScript, C#, REST APIs, Azure, AWS, GitHub Actions |
| **AI/ML:** | LLM agents, LangChain, Hugging Face, XGBoost, SMR-MR, multi-omics data analysis |

## Projects

**Legos | Product Lead | BTCUSDT Trading Infrastructure**

- Owned the product spec for a BTC/USDT spot and perpetual-futures market-making system — user stories, acceptance criteria, latency SLOs, and hard risk limits (position caps, drawdown) that drove the Rust pipeline design.
- Modeled exchange mechanics end-to-end — order lifecycle, funding/basis, and fee tiers — and validated them against **10M ticks at 70 ns p99 in-process latency** (excluding network I/O), with **88 tests** across data, strategy, risk, and Binance testnet order flow.

**Smart Handoff | Product Lead | Co-operators Designathon**

- Ran product discovery and mapped the anonymous-visitor-to-advisor journey in Figma; defined the advisor-routing concept, prioritizing by customer intent and advisor capacity.
- Pitched a segmented omni-channel go-to-market strategy with measurable success criteria — projected **25% higher qualified lead capture** and **40% more high-intent customer volume** at a controlled CAC (designathon estimates, not measured outcomes).

## Experience

**Manulife Financial Corporation** Toronto, ON, Canada
*Software Product Engineer* *May 2026 – Aug 2026*

- Led discovery with Canadian segment stakeholders and engineering teams — ran requirements workshops, defined user stories, acceptance criteria, and success metrics, and demoed ServiceNow workflows to secure sign-off; automation now absorbs **1K+ daily cross-system operations** for **5K+ developers** and removed the manual exception queue.
- Translated access-control and auditability requirements into a **GitHub App token exchange** (PyGithub) with team-scoped validation, least-privilege permissions, and audit trails, supporting compliance review across catalog automations.
- Partnered with platform engineers on AKS cluster and certificate checks, enabling a **Foundry LLM agent** to diff GitOps PRs against live cluster state and flag release-blocking misconfigurations before production.

**Treasury Board Secretariat** Toronto, ON, Canada
*Software Developer* *Sep 2025 – Dec 2025*

- Facilitated requirements and UAT sessions with QA teams and executives; turned feedback into user stories, demoed features, and secured sign-off to migrate **30 Selenium tests across five suites** to Katalon — driving adoption by **two QA teams** and cutting onboarding time for new QA analysts.
- Scoped and prioritized a job-title normalization initiative for a **5K-firm public dataset**, cutting the administrative backlog **85%** and unblocking peer-group and governance reporting.
- Improved analyst-facing report load time **30%** by rebuilding stored procedures, adding indexes, and removing cursors, lifting dashboard responsiveness for governance analysts.

**Guangdong Tiptop Asset Management Co., Ltd.** Guangdong, China
*Analyst* *Jan 2025 – Apr 2025*

- Prioritized a weekly shortlist from **500+ BSE-listed equities** using earnings quality, moat durability, and capital intensity, focusing portfolio-manager research on highest-conviction names.
- Built Audiowell's three-statement and DCF models (**¥3.5B market cap**) and partnered with portfolio managers on sell/hold scenarios; the analysis supported the post-listing sell-down of a **¥15M** pre-IPO position at **5–6×**, with a **¥30M+** stake retained.

**Lansi Institute of Artificial Intelligence in Medicine** Remote
*Data Analyst* *May 2024 – Dec 2024*

- Partnered with an international T2D research team to own the genomic ETL pipeline for **100GB of multi-omics data**; parallel preprocessing cut runtime **89%, from days to hours**, and XGBoost/SMR-MR screening across **68 studies** prioritized candidate drug targets carried into published papers.

**Sanyang Technology Co., Ltd.** Guangdong, China
*Software Engineer* *Jun 2024 – Nov 2024*

- Worked daily with business analysts and UX stakeholders to translate requirements and demos into user stories, acceptance criteria, and a **.NET reconciliation module** and REST API pipeline, automating month-end checks and powering real-time sales dashboards.

## Achievements

- As UX Research Hub Director, owned community growth and programming end-to-end: ran member research, secured a Google UXR guest speaker ( **50 attendees**, **50 new members**), grew membership **32× (10→318)**, and managed event funding with the executive team.
- Velocity Co-op Problem Award (top submission among co-op cohort); 3rd Place, SAF Investment Research Challenge; Finalist, SAF Strategy Case Competition, Moonshot Hackathon Winner
