1. prefered office: either
2. available for one work terms
3. github repo: https://github.com/faketut/GhostPilot

desc: GhostPilot, an invisible Windows overlay that streams WASAPI loopback audio through partial and final Azure ASR into a text LLM, paired with an Alt+P vision path utilizing Qt area capture and a vision LLM to fold context back into the prompt. Tackling the complexities of low-latency local RAG over custom knowledge bases and real-time multimodal stream handling
