Education

University of Waterloo Sep 2023 - Aug 2027
Bachelor's degree, Computer Science, Finance, and Statistics *Waterloo, ON, Canada*

Skills

Languages & SQL:	Python, SQL, Java, C#
Data Engineering:	ETL/ELT, Apache Airflow, dbt, data modeling, data quality testing
Cloud & DevOps:	GCP, Azure, Terraform, Azure DevOps, Docker, Kubernetes
Data & ML Platforms:	BigQuery, SQL Server, MySQL, PostgreSQL, PyTorch, Hugging Face, LoRA

Experience

Manulife Financial Corporation Toronto, ON, Canada
Software Engineer *May 2026 – Aug 2026*

- Built reusable ServiceNow workflows for a platform serving **5K+ developers**, automating **1K+ daily cross-system operations** with a **99% success rate** after refining validation to accept legitimate edge cases.
- Secured platform integrations by replacing plaintext credentials with **GitHub App token exchange** and team-scoped permissions; integrated live AKS and certificate checks into a Foundry agent to flag GitOps deployment mismatches.

University of Waterloo Waterloo, ON
Research Assistant *Jan 2026 – Apr 2026*

- Fine-tuned four specialist DeBERTa detectors with LoRA and co-designed a learned aggregator; measured **sub-50ms inference on a T4** and **80% F1 / 95%+ end-to-end accuracy** on held-out data.
- Compared learned fusion with fixed-threshold baselines and red-teamed against Llama-3-8B on **5K prompts**; used error analysis to reduce medical/education false positives.

Treasury Board Secretariat Toronto, ON, Canada
Software Developer *Sep 2025 – Dec 2025*

- Automated validation and normalization of duplicate/invalid titles in a **5K-firm dataset**, reducing manual processing time **85%** and enabling analyst peer-group reporting.
- Tuned SQL stored procedures and indexes to cut report load time **30%**; migrated **30 tests across five suites** to Azure DevOps CI/CD, with the framework adopted by **two QA teams**.

Waterloo Aerial Robotics Group Waterloo, ON
Autonomy Member *Jan 2025 – Apr 2025*

- Rebuilt telemetry for the UAV ground-station console (React/TypeScript, Python WebSocket, ROS), restoring **5 dashboard panels** and adding session record/replay for **4.2 hours** of flight logs within a **64 MiB** memory bound.

Lansi Institute of Artificial Intelligence in Medicine Remote
Data Analyst *May 2024 – Dec 2024*

- Built a reproducible Python ETL pipeline for **100GB of multi-omics data** in an international type 2 diabetes collaboration; per-sample multiprocessing cut preprocessing time **89%, from days to hours**.
- Applied XGBoost and SMR/MR² across a **68-study meta-analysis** to prioritize candidate drug targets; researchers carried the shortlist into published papers.

Sanyang Technology Co., Ltd. Guangdong, China
Software Engineer *Jun 2024 – Nov 2024*

- Built a Gantt visualizer for job-shop scheduling benchmarks and shipped Spring Boot/MySQL APIs serving dashboards and downstream ETL; demoed with production data and secured team sign-off.

Projects

CabStream ETL | Airflow, dbt, BigQuery, GCP

- Implemented and ran an end-to-end NYC taxi data pipeline: Airflow ingestion to GCS/BigQuery, dbt staging/dimensional models and marts, and Looker Studio reporting.
- Provisioned infrastructure with Terraform; added dbt freshness/uniqueness checks and CI tests for Airflow DAG logic.

Anchor | Python

- Built a Splunk monitoring agent that learns healthy baselines, ranks anomalous events, and generates LLM-assisted SPL investigation suggestions.
- Added feedback-driven signal reweighting to surface recurring unresolved deviations and monitoring blind spots.

Achievements

- **Velocity Co-op Problem Award** (top submission in cohort); Moonshot Hackathon Winner; Grew UX Research Hub **32× (10→318 members)**.
