Skills

Machine Learning:	PyTorch, Hugging Face Transformers, LoRA, scikit-learn, XGBoost
Methods:	model fine-tuning, ensemble learning, statistical analysis, evaluation, error analysis
Programming:	Python, Java, C/C++, SQL, TypeScript
Systems:	Azure, GCP, Kubernetes, Docker, Git, Linux, REST, WebSockets

Experience

Manulife Financial Corporation — Toronto, ON, Canada
Software Engineer — *May 2026 – Aug 2026*

- Built and refined reusable ServiceNow workflows for **5K+ developers**, automating **1K+ daily operations**; integrated live AKS and certificate checks into a **Foundry LLM agent** to flag GitOps deployment mismatches.
- Replaced plaintext GitHub credentials with **GitHub App token exchange**, adding team-scoped validation, least-privilege permissions, and audit trails.

University of Waterloo — Waterloo, ON
Research Assistant — *Jan 2026 – Apr 2026*

- Fine-tuned four specialist DeBERTa safety models with LoRA and co-designed a learned aggregator; neutral-context training reduced medical/education false positives, with **sub-50ms inference on a T4**.
- Compared learned fusion with fixed-threshold baselines (**80% F1, 95%+ end-to-end accuracy on held-out data**) and red-teamed against Llama-3-8B on **5K prompts**.

Treasury Board Secretariat — Toronto, ON, Canada
Software Developer — *Sep 2025 – Dec 2025*

- Automated duplicate/invalid job-title cleanup in a **5K-firm dataset**, reducing manual processing time **85%**; tuned SQL to cut report load time **30%**.
- Migrated **30 Selenium tests across five suites** to Katalon on Azure DevOps CI/CD; executive demo drove adoption by **two QA teams**.

Waterloo Aerial Robotics Group — Waterloo, ON
Autonomy Member — *Jan 2025 – Apr 2025*

- Rebuilt telemetry for the UAV ground-station console (React/TypeScript, Python WebSocket, ROS), restoring **5 dashboard panels** and adding session record/replay for **4.2 hours** of flight logs within a **64 MiB** memory bound.

Lansi Institute of Artificial Intelligence in Medicine — Remote
Data Analyst — *May 2024 – Dec 2024*

- Parallelized preprocessing of **100GB of multi-omics data** with per-sample Python multiprocessing, cutting runtime **89%, from days to hours** for an international T2D research collaboration.

Sanyang Technology Co., Ltd. — Guangdong, China
Software Engineer — *Jun 2024 – Nov 2024*

- Translated business-analyst requirements into implementation design and built a Java/Spring job-shop scheduling algorithm, APIs, and interactive Gantt renderer end-to-end.
- Demoed the workflow, secured team sign-off, and tested against production data; exposed reporting through Spring Boot/MySQL APIs for dashboards and downstream ETL.

Education

University of Waterloo — Sep 2023 - Aug 2027
Bachelor's degree, Computer Science, Finance, and Statistics — *Waterloo, ON, Canada*

Projects

Army of Safeguards | Python, PyTorch

- Built a text-safety system with four specialist DeBERTa detectors for toxicity, sensitive content, jailbreaks, and factuality.
- Implemented configurable threshold, weighted, and learned per-axis aggregation with benchmark and training pipelines.

AccessibilityAlly | Slack AI Assistant

- Built a Slack app with Bolt for JavaScript and Gemini that rewrites thread context for PM, executive, onboarding, and plain-language audiences.
- Added catch-up shortcuts, slash commands, DMs and mentions, image alt-text generation, and Slack/Jira retrieval tools.

Achievements

- **Velocity Co-op Problem Award** (top cohort submission); Moonshot Hackathon Top 100 finalist (solo entrant among 646); grew UX Research Hub **32× (10→318 members)**.
