1. prefered office: either
2. available for one work terms
3. shipped project: ServiceNow workflow automation at Manulife

desc: At Manulife, I built and shipped reusable ServiceNow workflows for a platform used by 5K+ developers, automating 1K+ cross-system operations each day. My first validation rules were too strict and rejected legitimate edge cases. I refined the checks to catch invalid requests without blocking valid ones, while keeping failures visible for follow-up. That iteration helped the workflows reach a 99% operation success rate.
