Skills

Languages:	Python, C/C++, Java, C#, Go, Bash, SQL
Frameworks:	.NET, Spring Boot, FastAPI, Node.js
Databases:	PostgreSQL, MySQL, MongoDB, Redis
AI/ML:	PyTorch, TensorFlow, Hugging Face, scikit-learn, LangChain, LangGraph, Microsoft Agent Framework
Cloud & DevOps:	AWS, GCP, Azure, Docker, Kubernetes, Terraform, GitHub Actions, Linux, Jenkins

Experience

Manulife Financial Corporation — Toronto, ON, Canada
Software Engineer — *May 2026 – Aug 2026*

- Owned reusable ServiceNow catalog workflows used by **5K+ developers**; pre-validation plus skip-on-failure orchestration absorbed **1K+ daily cross-system operations** and eliminated the manual exception queue.
- Led the migration of the ServiceNow orchestrator off plaintext basic auth to **GitHub App token exchange** (PyGithub), adding team-scoped validation, automated permission scopes, and end-to-end audit trails for compliance review.
- Extended the GOCC orchestrator with live kubectl and AKS certificate checks so a **Foundry LLM agent could diff GitOps PRs against cluster state**, catching deployment misconfigurations before release.

University of Waterloo — Waterloo, ON
Research Assistant — *Jan 2026 – Apr 2026*

- Fine-tuned a **4-expert DeBERTa safety ensemble** with LoRA, reaching **sub-50ms inference on a single T4** and cutting medical/education false positives via neutral-context training data.
- Showed a **learned meta-aggregator beat fixed-threshold fusion** (**~80% F1, 95%+ end-to-end accuracy** on held-out Hugging Face data) and red-teamed it against Llama-3-8B on **5K prompts**.

Treasury Board Secretariat — Toronto, ON, Canada
Software Developer — *Sep 2025 – Dec 2025*

- Built the job-title normalization module for a **5K-firm public dataset** (.NET MVC + SQL Server), cutting **85%** of the administrative backlog that had blocked analyst peer-group and governance reporting.
- Migrated **30 Selenium tests across five suites** to Katalon on Azure DevOps CI/CD; the executive demo led two other QA teams to adopt the framework and cut their no-code onboarding.
- Refactored platform modules and tuned SQL — rebuilt stored procedures, added indexes, removed cursors — cutting report page load **30%**.

Waterloo Aerial Robotics Group — Waterloo, ON
Autonomy Member — *Jan 2025 – Apr 2025*

- Rebuilt the telemetry path of **IMS**, the UAV ground-station console (React + TypeScript dashboard, Python WebSocket server, ROS bridge): restored **5 dead panels** and shipped **session record/replay** that holds **~4.2 hours** of flight logs inside a **64 MiB** memory bound.

Lansi Institute of Artificial Intelligence in Medicine — Remote
Data Analyst — *May 2024 – Dec 2024*

- Owned the genomic ETL pipeline for **~100GB of multi-omics data** behind an international T2D research collaboration; per-sample `multiprocessing` fan-out cut preprocessing **89%, from days to hours** on single-server hardware.
- Ran XGBoost feature selection with SMR/MR² across a **68-study meta-analysis**, narrowing the candidate drug-target shortlist that researchers carried into published papers.

Sanyang Technology Co., Ltd. — Guangdong, China
Software Engineer — *Jun 2024 – Nov 2024*

- Built the **Gantt visualizer** for a flexible job-shop scheduling system, turning dense algorithm logs into timelines the algorithm team used for daily benchmark A/B comparisons.
- Shipped **Spring Boot CRUD APIs** over MySQL for cloud reporting and BI, giving front-end dashboards and downstream ETL consumers one high-throughput data path.

Education

University of Waterloo — Sep 2023 - Aug 2027
Bachelor's degree, Computer Science, Finance, and Statistics — *Waterloo, ON, Canada*

Projects

wlp4-compiler | C++

- Built a **multi-pass C++ compiler** that scans, LR-parses, and type-checks WLP4 before generating ARM64 assembly; code generation supports control flow, procedures, pointers, and arrays.

Achievements

- **Velocity Co-op Problem Award** (top submission in cohort); Moonshot Hackathon Winner.
- Grew UX Research Hub **32× (10→318 members)**
