EDUCATION

University of Waterloo 09/2023 – 04/2028

Computing and Financial Management, Honours, Co-op

Majors: Computer Science, Finance, Statistics

EXPERIENCE

Manulife 05/2026 – 08/2026

Co-op

- Triage 10 weekly cloud and network infrastructure tickets from global ETS teams via ServiceNow, owning resolution and stakeholder follow-through.
- Co-developing `aks-onboarding-automation` to replace manual ServiceNow ticket exchanges, projected to compress onboarding turnaround from days to minutes per request.

Treasury Board of Canada Secretariat 09/2025 – 12/2025

Co-op

- Shipped a .NET MVC module that auto-normalized job titles across 5K public firms using pattern-matching heuristics; reduced manual data cleaning by 80%.
- Migrated 30 test cases across 5 suites from legacy Selenium to Katalon and stood up CI/CD on Azure DevOps, presenting demo to executives.
- Refactored core modules of an enterprise data platform and optimized SQL queries, cutting page load times by 30% while improving long-term maintainability.

Lansi Institute of Artificial Intelligence in Medicine 04/2024 – 12/2024

Co-op (Remote)

- Built genomic ETL pipelines for multi-omics data (100+ GB, FASTQ/VCF), orchestrating per-sample fan-out across cores with Python `multiprocessing` to compress end-to-end processing 89%.
- Co-authored a published T2D drug-target meta-analysis pooling 68 studies; trained XGBoost, SMR, and MR^2 models to link genetic variants with drug response.

Sanyang Technology Co., Ltd. 07/2024 – 11/2024

Intern

- Built foundational components of a flexible job-shop scheduling (FJSP) system, enabling the algorithm team to run macro production-planning experiments end-to-end.
- Delivered CRUD APIs across multiple cloud-platform product modules, unblocking upstream and downstream system integration on schedule.

PROJECTS

wlp4-compiler

- Multi-pass C++ pipeline: `wlp4scan` → `wlp4parse` (LR) → `wlp4type` → `wlp4gen` emitting ARM64 assembly.
- Codegen lowers control flow, procedures, and pointer/array ops with a stable calling convention; full transitions traceable through annotated `.wlp4ti` trees.
- **−79.6% output size vs the reference `wlp4c`** across 65 programs; CI gates every push on the 25-program byte-equal regression suite.

MiniKV

- Go LSM engine — CRC32C WAL, skip-list MemTable, snappy block SSTables with sparse index + file-level Bloom so negative lookups skip disk.
- Serializable optimistic transactions: snapshot reads, buffered writes, commit-time read-set validation against a bounded commit log — atomic on no conflict.
- Async leader/follower replication over HTTP NDJSON and gRPC streaming; followers resume from local `LastSeq()` on reconnect so applied events aren't replayed.

Syncle

- Android spatial-collaboration client in Kotlin + Jetpack Compose: 2D office map on pure Canvas with AABB walkability, edge-clamped camera follow, and edge-distance table proximity (not center-only) for tap-to-join.
- Realtime layer over LiveKit: 20 Hz binary position packets with remote-peer lerp, distance-based spatial audio gain, and per-table acoustic isolation via `table_id` participant attributes.
- Node/TS backend (Docker Compose with `livekit-server`) signs JWTs bound to a device-persistent `userId` so identity survives restarts; CI runs ktlint + unit tests and uploads debug APKs on `main`.

CERTIFICATES & SKILLS

Coursera: IBM Vector Database, Stanford Machine Learning, UCI Database Design & Operational BI, Rice Parallel-Concurrent-Distributed Programming, UA Reinforcement Learning

Skills: Python, SQL, C#, C++, Java, Git, Go, Kotlin, JavaScript, Linux, Windows, MacOS, .Net, Spring Boot, React, Node.js, Express.js, Flask, PostgreSQL, MySQL, MongoDB, Redis, AWS, GCP, Azure, Docker, Kubernetes, Terraform, GitHub Actions, Jira, Confluence, PyTorch, TensorFlow, Scikit-learn, OpenCV, GenAI tools
