Education

University of Waterloo Sep 2023 - Aug 2027
Bachelor's degree, Computer Science, Finance, and Statistics *Waterloo, ON, Canada*

Skills

Languages:	Python, C/C++, Java, C#, Go, Bash, Typescript, Javascript, SQL, R, VBA
AI/ML:	PyTorch, TensorFlow, LangChain, LangGraph, scikit-learn, Microsoft Agent Framework, OpenCV, pandas
Frameworks:	.Net, Spring Boot, React, Angular, Node.js, Flask, Rails, FastAPI, iOS, Android
Databases:	PostgreSQL, MySQL, MongoDB, Redis
Cloud & DevOps:	AWS, GCP, Azure, Docker, K8s, Terraform, GitHub Actions, Linux, Jenkins
Tools:	Git, Jira, Confluence

Experience

Manulife Financial Corporation Toronto, ON, Canada
Software Engineer *May 2026 – Aug 2026*

- Spearheaded the product strategy for an enterprise orchestration platform servicing over 10K global internal customers; automated 1K+ daily operations, eliminating 100% of manual processing and accelerating time-to-market for revenue-generating financial applications by an estimated 30%.
- Mitigated institutional security risks and ensured financial-grade compliance by overhauling the authentication architecture; designed fault-tolerant workflows that eliminated operational bottlenecks and saved approximately 400+ hours of engineering labor monthly.
- Pioneered an AI-driven risk management initiative by integrating LLMs to proactively detect cloud deployment misconfigurations; intercepted 95% of unauthorized GitOps drifts, preventing potential service outages and safeguarding continuous revenue streams from end-customer transactions.

Treasury Board Secretariat Toronto, ON, Canada
Software Developer *Sep 2025 – Dec 2025*

- Engineered a strategic data governance product standardizing unstructured reporting from 5,000+ corporate entities; unlocked macroeconomic benchmarking capabilities for customers, driving data-backed public revenue and economic policy decisions.
- Spearheaded the optimization of enterprise data pipelines, reducing core financial dashboard latency by 30%; successfully resolved high-priority customer complaints and accelerated time-to-insight for analysts, saving an estimated 200+ hours monthly.
- Directed an operational efficiency initiative, migrating 30 complex workflows to an automated low-code framework; pitched the solution to executive leadership, achieving cross-departmental adoption and reducing operational onboarding costs by 40%.

Lansi Institute of Artificial Intelligence in Medicine Remote
Data Analyst *May 2024 – Dec 2024*

- Engineered a high-throughput data analytics platform servicing international research teams; optimized massive-scale ETL pipelines (100GB+), reducing processing time by 89% (from days to hours) and significantly accelerating the R&D lifecycle.
- Spearheaded a quantitative predictive modeling initiative utilizing XGBoost and SMR statistical algorithms across a 68-study meta-analysis; successfully isolated high-value predictive signals, accelerating the pipeline for future revenue-generating therapeutics.
- Strategized and deployed a highly cost-efficient parallel computing architecture (per-sample fan-out) that maximized single-server computing resources, avoiding the heavy capital expenditure of distributed clusters while delivering enterprise-grade performance.

Sanyang Technology Co., Ltd. Guangdong, China
Software Engineer *Jun 2024 – Nov 2024*

- Spearheaded the product development of a visual analytics engine for enterprise resource optimization; translated complex quantitative scheduling algorithms into actionable dashboards, optimizing B2B manufacturing customers' capacity and driving direct operational revenue.
- Architected scalable Business Intelligence (BI) data infrastructure, deploying high-performance APIs to service downstream ETL pipelines; empowered internal customers to accelerate A/B strategy backtesting and algorithmic model iterations by an estimated 40%.
- Delivered enterprise-grade microservices that eliminated critical data bottlenecks in executive reporting; standardized complex operational dataflows, ensuring zero-latency decision-making and seamless evaluation of 50+ benchmark instances daily.

Projects

ArmyOfSafeguards

- Four DeBERTa safeguard heads (toxicity, sexual, jailbreak, factuality) run in parallel via `expert_runner`, hot-swappable via env vars.
- Learned logistic meta-aggregator fuses per-expert probabilities into a calibrated verdict, beating threshold baselines on held-out HF.
- Training pipeline turns HF labels into expert-Q features and meta JSONL, so adding a new expert needs no aggregator changes.

Achievements

- Scaled UX Research Hub 32× (10⟶318 members) as Director; negotiated Google UXR keynote at $0 cost and brokered TikTok chapter cross-promotion for sustained recruitment growth.
- Velocity Co-op Problem Award (top submission among co-op cohort); 3rd Place, SAF Investment Research Challenge; Finalist, SAF Strategy Case Competition, Moonshot Hackathon Winner

Coursework

IBM Vector Database, Stanford Machine Learning, UCI Database Design & Operational BI, Rice Parallel-Concurrent-Distributed Programming, UA Reinforcement Learning, Compiler, Algorithm,
